Free Masonic Application

Product Whitepaper v1.0

This document describes the publicly confirmed functionality, organizational model, commercial framework and implementation approach of the product.

1. Executive overview

Free Masonic Application is a specialized digital platform for organizational, membership, financial and administrative workflows within a Masonic organization. It is maintained as a distinct business product in the Victorious Systems ecosystem.

The core principle is clear separation of responsibility: a Small Lodge manages its own data, a Grand Lodge manages its connected Small Lodges, while Masonic SuperAdmin is the Victorious Systems commercial layer for customers, licenses, packages and product access.

2. Organizational model and access levels

Small Lodge Admin: access limited to its own lodge, members, meetings, attendance, dues, payments and daily administration.

Grand Lodge Admin: centralized overview and management of connected Small Lodges, administrators and Grand Lodge level organizational processes.

Masonic SuperAdmin: the Victorious Systems commercial layer for clients, packages, licenses, Grand Lodge administrators, license history, access logs, activity audit and security overview.

3. Functional scope

Members and membership status; candidate applications and admission workflow; meetings and attendance; activity calendar; dues, charges, payments and debts; expenses and reports; committees and committee meetings; temples and bookings; activity records; analytics, system settings, backups and central administration in the applicable plans.

4. Commercial model

The product uses START, PRO and PREMIUM packages. Annual licensing provides 12 months of service with a commercial model based on 11 monthly reference values. Implementation is a separate one-time fee. Standard import describes the initial data migration volume included with implementation; it is not a cap on the total number of members or records in the application.

Plan	Monthly ref.	Annual	Implementation	Support/year	Standard import
START	29.99 EUR	329.90 EUR	149 EUR	6	100
PRO	59.99 EUR	659.90 EUR	249 EUR	12	250
PREMIUM	89.99 EUR	989.90 EUR	349 EUR	24	500+ / by agreement

Note: support will be connected to the centralized Victorious Systems Ticket Service in a separate ecosystem phase.

5. Security and organizational isolation

The application uses separated administrative levels and scoped organizational access. Sessions are configured for automatic logout after 15 minutes of inactivity. Production runs with debug disabled. The commercial license belongs to the Grand Lodge, while Small Lodges remain organizational units within its scope.

6. Demo and evaluation

Demo accounts are available for Small Lodge, Grand Lodge and Masonic SuperAdmin evaluation. The public Product page combines product presentation, packages and demo entry points. Demo data allows prospects to understand workflows without changing real production data.

7. Implementation and migration

Implementation covers initial setup, base configuration, license activation and a standard import volume. START includes up to 100 records, PRO up to 250, and PREMIUM 500+ records by agreement. Larger or more complex migrations are scoped separately according to source-system structure and data quality.

8. Position within the Victorious Systems ecosystem

Free Masonic Application remains a functionally and commercially distinct product. Control Center acts as a central read-only overview and link hub, while Masonic licenses are created and changed only in Masonic SuperAdmin. The centralized Ticket Service will be connected in a separate phase after implementation of all completed applications.
