LexMonitor

Product Whitepaper v1.0

This document presents the publicly confirmed production and commercial state of the product after final alignment of packages, demo access and Victorious Systems integration.

1. Executive overview

LexMonitor is a digital platform for law firms that brings clients, matters, deadlines, hearings, documents, tasks, communications, finance, legislation and AI assistance into one connected workspace.

The product is structured as a multi-user SaaS system within the Victorious Systems ecosystem. Each law firm operates in its own organizational scope, while SuperAdmin manages firms, plans, subscriptions, demo monitoring and system settings.

2. Operational scope

The core office layer covers clients and matters, deadlines and hearings, calendar, case documents, tasks and communications. Data remains connected to the relevant client and matter, reducing fragmentation across separate records.

PROFESSIONAL extends the operational layer with services and pricing, time entries, invoices, payments, expenses and a financial overview of the firm.

3. Legislation and AI assistance

PREMIUM AI adds AI Assistant and analytical capabilities for clients, matters, deadlines, hearings, unpaid invoices, unbilled work, priorities, risks, recommendations, explanations and action plans.

AI capabilities are assistive operational and legal reminders. They do not replace the lawyer, do not make decisions on behalf of the user, and use data recorded in the system to highlight items that require review or attention.

4. Commercial model and packages

LexMonitor uses three active plans: START, PROFESSIONAL and PREMIUM AI. Monthly and annual prices, together with limits for users, clients, matters and storage, reflect the current production configuration.

A plan is assigned to a law firm through a subscription. SuperAdmin manages plans and subscriptions, while office users operate only within their own organizational scope.

Plan	Monthly	Annual	Users	Clients	Matters	Storage
START	RSD 5,900	RSD 65,900	1	150	300	1 GB
PROFESSIONAL	RSD 11,900	RSD 129,900	5	500	1,500	5 GB
PREMIUM AI	RSD 17,900	RSD 196,900	15	1,500	5,000	20 GB

Prices are current production values in RSD. Special migrations, customization and development outside the standard plan are scoped separately.

5. Demo and evaluation

The public product presentation and a dedicated demo page are available without administrative access. The demo firm contains test data and allows prospects to review realistic workflows across key modules.

Separate Office Admin and Demo SuperAdmin levels support evaluation of both the end-user workspace and the commercial administration layer.

6. Security and organizational isolation

Production runs with debug disabled and automatic logout after 15 minutes of inactivity. Office users are scoped through `law_office_id`, while SuperAdmin accounts are not tied to an individual law firm.

The commercial model uses `law_offices`, plans and subscriptions as the basis for organizational separation and package assignment. Dependency security status is rechecked in the final production MASTER audit.

Production access

Public product	<code>lexmonitor.victoroussystemrs.rs/</code>
Demo	<code>lexmonitor.victoroussystemrs.rs/demo-login</code>
Office login	<code>lexmonitor.victoroussystemrs.rs/login</code>
SuperAdmin	<code>lexmonitor.victoroussystemrs.rs/super-admin/login</code>

7. Implementation, migration and support

Public plan pages include hosting, technical maintenance, security updates and a level of user support appropriate to the plan. Larger data migrations, custom reports, additional configuration and new feature development are scoped separately.

The centralized Victorious Systems Ticket Service is planned as a shared ecosystem layer after completed applications are connected; its deferral is not a blocker for production closure of LexMonitor.

8. Position in the Victorious Systems ecosystem

LexMonitor remains a standalone legal-technology product with its own public presentation, Office administration and SuperAdmin panel. Victorious Systems Control Center links to the public product, demo, Office login and SuperAdmin login, but does not replace commercial administration inside LexMonitor.

This Whitepaper is part of the central Victorious Systems documentation and is published in Serbian and English together with direct PDF editions.

Victorious Systems
